

## RECALL of certain lots of H1N1 Nasal Vaccine

The CDC notified vaccinators that certain lots of nasal vaccine may have a reduced potency if not used within the next week. The Hillsborough Health Department used one lot of these vaccines, but all were used by December 8, well before the January 19 expiration date. The lot number was 500764P. The recall is only for those who might still have this vaccine, because the vaccine might have a slightly reduced potency at this time. Nobody who received this vaccine needs to be revaccinated. The vaccine is safe and effective. For any further questions, please contact the CDC at 800-CDC-INFO (800-232-4636).
